Software <

Hardware <

Systems <

Security <

Usability & Accessibility <

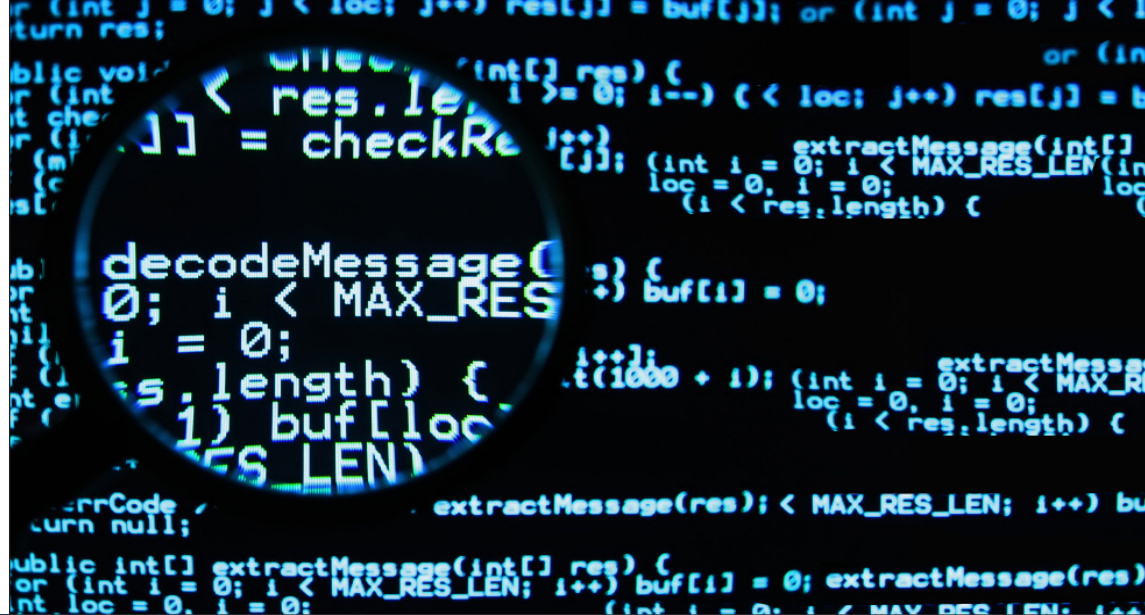

Gaming, Wagering, <

Lotteries & Casinos

Media & Communications <

Physical & Materials <

Test assured, rest assured.

eThreatz Automated Malware Testing

eThreatz Automated Malware Testing

eThreatz, by Enex TestLab, is the world’s first fully automated, independent, malware testing service.

Developed at Enex TestLab to be the most accurate, flexible and cost effective service available, eThreatz addresses the complete range of malware, including: spyware, worms, trojans, viruses, rootkits, adware, crimeware, and botnets.

eThreatz features:

> Live malware:

Live malware is used during testing. Malware is harvested continuously from a range of global independent honeypots and honeynets maintained by Enex TestLab. This ensures a constant supply of the most current material threats.

> Open Source:

Open Source principles underpin all of Enex TestLab’s malware testing. All our methodologies and material are completely open and available for verification.

> Automation:

Enex TestLab **eThreatz** is fully automated, enabling complete flexibility, scalability and repeatability—for the lowest possible cost. It can be customised to suit the requirements of any organisation.

Enex TestLab automated malware testing services is designed to be repeatable—automatically. This means that the same batch of malware can be used repeatedly in order to regressively test for a specific requirement. Or, in another useful example, Enex TestLab can run live, constantly updating tests in real-time to determine how effectively a product can defend against malware in the real world, at any given moment in time.

> Reporting:

The report options are complete and detailed. Baseline information about true positives, false positives and false negatives is readily catered for, with additional requirements easily included.

Enex TestLab **eThreatz** reporting module enables results to be represented in a range of charts for easy analysis. Reporting is automatically generated and instantly made available to clients via a password protected web portal. Reports remain confidential and are only accessible to the client.

> Flexibility:

Our testing can be easily customised to a client’s unique needs. Enex TestLab offers a range of tailored options and can provide a complete bespoke service when required.

Enex TestLab tests **Gateway** (hardware appliance/device sitting between network and external threats) and **End Point** (security software installed on operating systems) products.

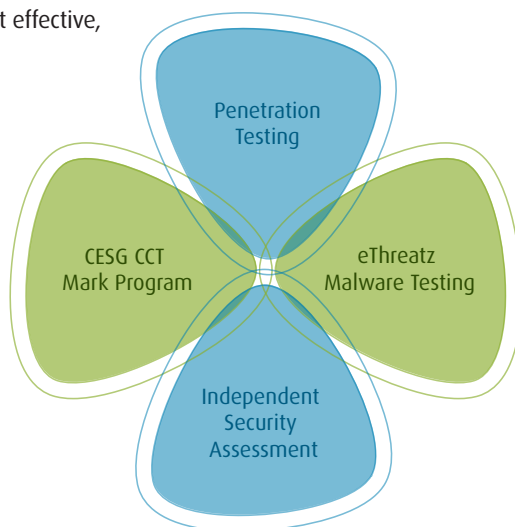

eThreatz Automated Malware Testing

Enex Testlab **eThreatz** automated malware testing services include:

- > Stand alone (one-off) product testing
- > Contracted monthly testing
- > Contracted continuous testing of a product with real-time reporting
- > Multiple product testing and comparison. (This can be either a one-off or on a continuous basis.)
- > Full product life cycle continuous testing including zero-day.
- > Bespoke testing

The benefits of using the Enex Testlab **eThreatz** automated malware testing services include:

- > Highly cost effective, competitively priced
- > Fast service
- > Uses current malware threats (not material that is months out of date)
- > Automated testing means it is reliable, cost effective, and repeatable
- > Open methodologies
- > Full and detailed reporting
- > A unique service: not matched anywhere else in the world!
